SUMMARY

My journey into software development started with a curiosity to understand how websites and applications work behind the scenes. That curiosity has grown into a passion for building web applications using Python and full-stack technologies. As a Python Developer, I am continuously strengthening my skills in Python, Django, JavaScript, SQL, and GitHub while working on hands-on projects. I believe every project is an opportunity to learn, improve, and become a better developer.

SKILLS

- Python Programming
- Web Development
- R Programming
- MySQL
- Power BI

EXPERIENCE

Web Developer Intern — ApexPlanet

09/2025 - 11/2025

- As a Virtual Intern at ApexPlanet, I have gained hands-on experience in building web pages and fixing issues as they arise.

EDUCATION

Bachelor of Technology: Information Technology — 77%

Nalla Narasimha Reddy Engineering College, Hyderabad

2022 - 2026

MPC — 92%

GDMM Junior College, Nandigama

2020 - 2022

SSC — 92%

Nagarjuna High School, Chandarlapadu

2019 - 2020

CERTIFICATIONS

- **NPTEL Certification – Python for Data Science**

Issued by NPTEL (IIT Madras), August 2025

- **Power BI Certification – Technology Learning Center**

Gained proficiency in data visualization, dashboard creation, and business intelligence reporting using Power BI.

PROJECTS

Child Psychology Insights through Chatbot Interaction

- Developed an AI-driven chatbot to provide quick and personalized advice on child psychology, utilizing Python and NLP techniques.

Multi-Objective Metaheuristic Scheduling for Minimizing Cost and Energy Usage in Cloud Computing

- Introduced a novel Tribal Intelligent Evolution Optimization (TIEO) algorithm for efficient task scheduling in cloud environments.
- Task scheduling in cloud computing is difficult because of dynamic workloads and diverse resources. Existing algorithms often cause high response time, energy use, cost, and makespan, while also struggling with premature convergence, local optima, and high complexity. A smarter, adaptive scheduling method is needed to improve efficiency, reduce delays, and balance cost and energy.

PUBLICATION

TIEO: Metaheuristic Driven Cost and Energy Aware Scheduling in Cloud Computing (2025) — Santhosh Kumar Medishetti, Narala Anusha
